Turn off your taps on
22 October 5pm – 10pm
and join us in improving
water knowledge

TAP PAUSE LEVELUP

How to Save Water at School

1. Collect excess water and use it wisely

Place ice cream containers under school water fountains and use excess water in the garden.

2. If not using the tap, turn it off

Turn the tap off as soon as you've washed your hands. Put signs near the basins to remind students to do the same.

3. Report leaks

Report any leaking taps, water fountains or toilets straight away so they can be fixed. Make it a classroom activity to check for leaks regularly.

4. Use a container to wash your brushes

Wash paint brushes in a bucket or ice cream container, rather than under a running tap.

5. Use a refillable water bottle

Bring a water bottle to school. At the end of the day, any leftover water can be poured onto the garden.

6. Talk to others about water

Raise awareness of the importance of water by creating colourful posters on water use and water saving. You can even start your own water-saving team.

7. Install aerators on taps

Talk to your maintenance coordinator about fitting aerators to the taps in your school. Aerators reduce the amount of water flowing from the tap by up to 50%, while maintaining the pressure.

8. Install water butts

Talk to your headteacher, maintenance coordinator and school council about installing water butts. Once installed, you can connect the tanks to your toilets or use the water for your school gardens or veggie patch.
